## Towers of strength

---

### IHS Towers Corporate Profile

IHS Towers is one of the largest independent owners, managers and developers of shared telecommunications infrastructure, or tower operators in the world with approximately 30,200 towers.

IHS Towers is the largest independent tower operator in EMEA and the third-largest independent multinational tower operator globally, in both cases by tower count. IHS Towers has an accomplished track record of entering new markets and regions, having successfully developed market-leading positions in five countries in Africa – including Cameroon, Côte d’Ivoire, Nigeria, Rwanda, and Zambia – Latin America – including Brazil, Peru and Colombia and the Middle East with a footprint in Kuwait. IHS Nigeria is IHS Towers’ largest subsidiary with over 16,000 towers in its portfolio.

IHS Nigeria consistently delivers industry-leading network uptimes even in challenging environments with low grid availability, difficult climates and political instability. Over the past few years, the company has deployed hybrid power systems including solar and wind power solutions to improve network availability and reduce diesel dependency and CO<sub>2</sub> emissions. IHS Nigeria has also developed and maintained cutting edge Network Operating Centers which monitor all aspects of tower sites (including power systems, access control, diesel tanks etc.) in real-time.

IHS Towers employs over 2,000 people directly and exists to provide seamless uninterrupted telecommunications service, through its tower infrastructure, to its customers which are local mobile network operators. IHS Towers helps expand coverage and accelerate the roll-out of the newest and fastest communications equipment to help communities and businesses grow. By investing in its people and local communities, IHS Towers aims to help facilitate economic and social independence so that potential can become a reality.

IHS Towers is committed to operating both sustainable and reliable towers in all countries of operation.
